

INFRAM PUTS THE PINPOINT ON PLUMBING

When a building gets old, the pipes may spring a leak, the foundation may crack, and you may lose a shingle or two off the roof. Like a building constructed upon a shaky foundation, critical applications (like your EHR) that sit upon an aging network, are equally vulnerable.

As a HIMSS Analytics Certified Consultant, VertitechIT Executive Project Officers work with you in a simple, three step process. We'll help you to complete the survey, interpret your domain scores, and conduct an onsite GAP Assessment Review with senior leadership to interpret your INFRAM results and present concrete, tactical projects to address specific strategic and clinical business goals.
