

INFRAM+ IS THE LINK TO CLINICAL STRATEGY

In many cases, your INFRAM score is only as good as the way you apply it to actual clinical workflows and processes. INFRAM+ utilizes VertitechIT's proprietary methodology to provide that all-important link between infrastructure and the doctors and nurses who rely on that technology every day.

The result of the clinical mapping process is a document that:

- Empowers IT professionals to be a part of the care delivery team
- Provides clinicians with critical understanding and input into IT decision making
- Establishes a roadmap that helps maximize future technology investments

INFRAM+ prioritizes strategy, assuring the right technology is purchased for the right people at the right time.
