

AN IT ROADMAP IN AN “EGG SHELL”

Taking INFRAM+ a big step further, VertitechIT’s Quadruple Aim Roadmap creates a three-year path to digital transformation, laying out a schedule for purchases, installation, and adoption. The VertitechIT “Egg” is modeled after the layered approach of every leading cloud provider and MSP.

The Quadruple Aim Roadmap literally transforms the IT department itself, breaking down long siloed walls, and allowing personnel resources to be deployed as needed to address strategic imperatives.

In the end, it’s about using technology to reduce healthcare costs, improve the health of populations, better the patient experience, and allow doctors and nurses to focus on what they do best.
